BUSINESS MODEL

Riders use their smartphones to access scooters through our app. The control unit communicates with riders via 4G internet. Riders enable location service in order to start, track, and end rides.

Our scooters are equipped with GPS systems, making it easy for our highly skilled operations team to track the location, battery levels, and status of each scooter in our fleet, at any given time.

Electric Scooter

Our scooters are completely electric controlled, offering a comfortable and energy-efficient ride. With a top speed of 25 km per hour, our scooter will reduce the time it takes for riders to reach their destinations.
